

Patricia R. Manhenda

SOFTWARE & ML ENGINEER · MACHINE LEARNING · DEEP LEARNING · BACKEND

• Athens, Greece • pattymcharis15@gmail.com • +30 694 579 0539 • github.com/Rumbie-Manhenda
• linkedin.com/in/patricia-manhenda

I build machine-learning systems end to end: preparing the data, training and evaluating the model, then shipping the API and the interface around it. First-Class Honours in Computer Science, specialising in Machine Learning and Neural Networks, from the University of London. Currently a network operations engineer at Optasia in Athens, and studying how technology meets society at the University of Athens. Comfortable across Python, JavaScript and SQL, and with the tools that carry a model out of the notebook - TensorFlow, Keras, Docker, Git.

EXPERIENCE

Network Operations Engineer

NOV 2024 - PRESENT

Optasia · Athens, Greece

- Monitor production systems and operational data in Grafana and Nagios, catching anomalies before they become incidents.
- Investigate incidents and run root-cause analysis across event-driven processes and technical infrastructure.
- Work to structured escalation, incident documentation and SLA-based workflows, so a fix is repeatable rather than improvised.

AI Prompt Engineer

MAY 2024 - NOV 2024

Scale Outlier · Remote

- Designed and refined LLM prompts to improve model performance on complex technical and business tasks.
- Evaluated AI-generated outputs against project benchmarks, identifying quality, reasoning and alignment problems.
- Applied few-shot prompting and structured evaluation to improve consistency and data efficiency.

Software Engineering Intern

MAR 2022 - JAN 2023

Bright Network IEUK · United Kingdom

- Contributed to the design, coding and testing of team web applications alongside a small engineering team.
- Assisted with back-end development and database work, including server-side scripting and data integrity.

Customer Service Representative

JAN 2020 - JAN 2022

Webhelp · EU remote

- Supported B2B clients with technical troubleshooting, order management and issue resolution using SAP, Salesforce and Excel.
- Investigated operational data to identify process bottlenecks and automation opportunities.

Data Analyst

JAN 2019 - JAN 2020

Herald Publishing House · Harare, Zimbabwe

- Developed and evaluated machine-learning models of customer behaviour to generate business insight.
- Cleaned, analysed and visualised data in Python, turning raw records into decisions the business could act on.
- Resolved data-quality issues to make management reporting trustworthy again.

SELECTED PROJECTS

Aircraft Predictive Maintenance

github

Deep learning over sensor telemetry to anticipate which component fails next, turning scheduled maintenance into predicted maintenance.

Intrusion Detection System

github

Classifying network traffic to separate hostile patterns from ordinary noise, so a compromised host is caught early rather than after the fact.

Disease Prediction from Symptoms

github

A classification model that predicts the likely condition from a set of reported symptoms, trained and evaluated on a medical symptom dataset.

A Secure, API-Driven Raffle System

github

A Django REST API that brings fairness, security and transparency to digital raffles - the whole lifecycle, from ticket allocation and verification codes to random winner selection.

The Portfolio Itself

github

Four hand-written pages on a token-driven stylesheet, plus an Express backend that validates, rate-limits and emails the contact forms - covered by tests for the routing, the validation and the mailer.

Neat Narrative Website

live site

A fully responsive, minimal cleaning-services site built with HTML, CSS, Bootstrap and JavaScript, published on GitHub Pages.

PROGRAMMING LANGUAGES

Python	95%	HTML5 & CSS	90%
JavaScript	95%	React	80%

FRAMEWORKS & LIBRARIES

TensorFlow	95%	Node.js & Express	80%
Keras	95%	Docker	80%
MySQL & MariaDB	90%	Bootstrap & jQuery	80%
Git & GitHub	85%	Microsoft Azure	80%

ALSO WORKING WITH

SQL & PostgreSQL · NoSQL · Pandas & NumPy · scikit-learn · Django & Flask · REST APIs · AWS · Google Colab · Jupyter · Linux · Grafana · Prometheus & Nagios · SAP & Salesforce

EDUCATION

MSc Science, Technology & Society

2026 - PRESENT

University of Athens · Athens, Greece

Studying how technology meets people and society: the decisions behind what gets built, and the responsibility that comes with it.

BSc Computer Science

2020 - 2024

University of London · United Kingdom

First-Class Honours, minor in Artificial Intelligence & Machine Learning. Specialisation in Machine Learning and Neural Networks.

Advanced High School Certificate - STEM

2014 - 2017

ZIMSEC · Zimbabwe

Mathematics, physics and chemistry. GPA 3.92.

CERTIFICATIONS & AWARDS

AI in Action	Forage / Vista Equity Partners
József Váradi Scholarship	2020
Presidential STEM Scholarship	2018 - 2020
Greek Language Certificate	University of Athens

LANGUAGES

English	Fluent - mother tongue
Greek	Intermediate

AVAILABILITY	WORK PERMITS	RELOCATION
14 days notice period	Greece, EU remote	Open, with sponsorship
